

FERROALLOYS FOR PRODUCTION OF STEEL AND IRON

Ferroalloys are various alloys of iron with other elements (silicon, chromium, etc.). Ferroalloys are used for alloying and deoxidizing steel, for binding liquid impurities and imparting required structures and properties to molten metals.

We offer the following ferroalloys necessary for production of steel and iron:

- Ferrosiliconzirconium
- Ferromanganese
- Ferrosilicon
- Ferrochromium
- Silicocalcium

At the customer's option, we can make up a set of various ferroalloys and arrange consolidated shipment.

Packaging:

- PE-lined big bags with capacities of 0.5 and 1.0 tons
